## APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

## EIGHTH SEMESTER B.TECH DEGREE EXAMINATION, MAY 2019

Course Code: ME482 **Course Name: Energy Conservation and Management** Max. Marks: 100 **Duration: 3 Hours** PART A Answer any three full questions, each carries 10 marks. Marks 1 a) Compare and contrast conventional and non conventional energy. (5) b) Make an outline of the world energy scenario and comment on it. (5) 2 a) Climate change is caused by human activity, mostly related to the use of energy. (7) Substantiate your answer. (3) b) List out the various types of energy auditing 3 a) Prepare a short note on the tariff structure of state electricity billing (5) b) With the help of power triangle explain: explain active power and reactive (5) power. 4 Define the following: Lumens, Lux and Luminous efficacy. (6) What are the features of an energy efficient motor? (4) PART B Answer any three full questions, each carries 10 marks. 5 With a schematic diagram explain the waste heat recovery systems in a boiler (7) plant. b) Is it possible to assess the combustion efficiency of a boiler by flue gas analysis? (3) **Explain** 6 (5) a) Briefly explain flash steam systems. Steam at 425 degree centigrade and 30 bar pressure is feeding to a turbine kept at (5) a distance of 100 m from the boiler plant. How will you avoid the entry of condensate in steam in to the turbine? Explain 7 a) Explain the importance of impeller trimming in pumps. (5) What are the energy conservation opportunities in a compressor system? (5) (5) 8 A centrifugal pump installed in a domestic system is not delivering water.

Investigate the possible reasons and recommend the corrective measures.

b) During an energy audit in an air-conditioning plant it is observed that the damper provided in the cold air supply duct is partly closed during the working time.
Commend on this.

## PART C

## Answer any four full questions, each carries 10 marks.

- 9 Explain the various types of energy audit in detail. (10)
- Explain the various phases of energy audit. (10)
- Prepare an energy audit report conducted in a domestic system. The building is installed with rooftop PV system and the owner is having a four wheeler also.
- 12 a) A new cogeneration plant installation is expected to reduce the company's (5) annual electricity bill by Rs.4,86,000/-. The capital cost of the new installation is 22,20,000/- and the annual maintenance and operating cost are Rs.42,000/-. Find out the simple payback period.
  - b) Define Internal Rate of Return. How it can be found out? (5)
- What is Life Cycle Costing? Explain the components in LCC (10)
- 14 Calculate the NPV of the investment, if the interest rate is 12% and capital (10) investment is Rs. 25 Lakhs and comment on the feasibility of the project. The return from the project is as follows:

| Year | Cash Flow in Lakhs |
|------|--------------------|
| 1    | 3.2                |
| 2    | 3.5                |
| 3    | 4.3                |
| 4    | 3.8                |
| 5    | 4.5                |
| 6    | 5                  |
